

## NIST Traceable Calibration Service

Maintain your equipment's performance with this fully traceable service.

Calibration is an essential part of equipment maintenance. STERIS offers calibration procedures to address your equipment's specific needs over its entire lifecycle.

Performed by specially trained, field-based technicians, these tests are fully traceable to international standards and detailed in a complete report kept on file with STERIS for a minimum of three years.

Calibration and verification points are determined by STERIS, the manufacturer or your SOPs. We will make necessary adjustments to 'out of tolerance' conditions we may find and include the results in your final report.

**After every calibration, your STERIS technician will review the report with you.  
Each report includes:**

**A DETAILED LIST**  
of 'As Found' and 'Corrected'  
readings

**TOLERANCE PAGE  
AND SIGNATURE PAGE**  
including a list of standards, procedures,  
temperatures, pressures, comments and signatures  
from both you and your STERIS technician

**CALIBRATION CERTIFICATES**  
for each instrument used  
in the calibration

Your equipment will also be tagged to show cGMP compliance.

**Compatible STERIS  
equipment offerings:**

- Steam Sterilizers
- Laboratory and GMP Washers and Dryers
- VHP Biodecontamination and Low Temperature Sterilization Systems
